Formatting Your Jupyter Notebook for Grading

1. Put your name in a markdown cell at the top of the notebook:
2. Label each question and subquestion with a cell that says the question number.
3. Only print things that are necessary (not the whole dataset).
4. After everything is done, restart the kernel to clear the output and then run all the cells again.
 - a. This helps you understand if you had any errors with putting cells out of order.
 - b. **Check to make sure that it didn't print something unnecessary before turning it in.**
